Summary

U.S. coal production in the week ended November 21, 1992, as estimated by the Energy Information Administration from railroad car loadings, totaled 20 million short tons. This was about the same as in the previous week and 7 percent lower than in the comparable week in 1991.

Production east of the Mississippi River totaled 12 million short tons, and production west of the Mississippi River totaled 8 million short tons.
